PROFILE

.NET developer with 15+ years of experience on critical systems in banking, healthcare, telecom and retail. I specialize in modernizing legacy systems and building SaaS products end to end. I work with Clean Architecture, CQRS and an AI-assisted development workflow based on specifications and agents. Beyond coding, I do functional analysis: I gather requirements with clients, agree on delivery timelines and follow every change through to production.

EXPERIENCE

Independent

Sep 2026 – present

Freelance .NET developer and founder of Festivy

- Launched Festivy, a SaaS platform to create and manage digital events (React, TypeScript, Supabase), now evolving toward a B2B model for event planners.
- Designed and built end to end Puestito (multi-tenant ecommerce SaaS with custom domains and Mercado Pago payments) and AdminConsortio (management SaaS for property administrators), on .NET 10 with Clean Architecture, CQRS and PostgreSQL.
- Built my own AI-assisted development workflow, with specialized agents (architecture, testing, QA) orchestrated from specifications.

Bistrosoft

Feb 2026 – Sep 2026

.NET Developer

- Led the delivery of enhancements and support fixes through an AI-agent-driven workflow (Claude Code): defined scope, orchestrated the agents and validated every change through to production deployment.
- Worked with .NET on the backend and Vue on the frontend.
- Coordinated with other teams and directly with clients, negotiating delivery timelines.

Grimoldi (via consultancy)

May 2025 – Jan 2026

Full Stack .NET Developer · Functional Analyst

- Refactored a critical returns module in .NET Framework 4.7 under high user concurrency.
- Removed a severe bottleneck (transactions opened at controller level were locking the database) by redesigning transaction handling and internal logic. Result: better performance and fewer bugs in a revenue-critical flow.
- Acted as technical lead for the module, owning refactoring decisions and its stability.

Telmex · Monex (via consultancy)

Jan 2023 – Mar 2025

Full Stack .NET Developer · Functional Analyst

- Built HOLO, a low-code platform for creating custom enterprise subsystems, with reusable Blazor components.
- Implemented an AI solution that reads contracts and extracts key data (dates, vendors, expirations), reducing manual work.
- Built real-time features with SignalR: per-module chat and vendor auctions.
- Gathered requirements directly with clients and turned them into custom modules (vendors, contracts, absences, access control and roles).

Hospital Británico

Jun 2020 – Dec 2022

Full Stack .NET Developer · Functional Analyst

- Sole developer of the medical staff payments system, reporting directly to hospital departments.
- Led the migration from legacy ASP.NET to .NET Core, React and SQL Server with no operational impact.
- Tuned the database and critical stored procedures to improve performance.
- Documented existing processes to ensure a risk-free transition.

Grupo Santander

Sep 2014 – Jun 2020

Full Stack .NET Developer

- Built +CHE, a customer management platform for branch account executives (.NET and Angular): personal data, loans, cards and banking procedures.
- Took part in designing and validating a credit risk scoring algorithm.
- Worked in a highly regulated environment with a focus on quality and traceability.

Telecom

Feb 2010 – Sep 2014

Full Stack .NET Developer

- Built SEGAT, a work order management system that replaced paper and spreadsheet processes.
- Contributed to its initial Silverlight architecture and its later migration to .NET and AngularJS.

TECHNICAL SKILLS

Backend: C#, .NET 8/10, ASP.NET Core, Web API, .NET Framework, SignalR, Node.js

Frontend: React, TypeScript, Blazor, Angular, Vue, Next.js

Data: SQL Server, PostgreSQL, Supabase, MongoDB, Firebase

Architecture: Clean Architecture, CQRS, MediatR, multi-tenancy, automated testing

AI and tooling: Claude Code (agents and spec-driven development), Git, Azure DevOps, GitLab, Jira

EDUCATION

Higher Technical Degree in Applied Computing — UTN-INSPT

2020 – in progress

Computer Technician — ET 21 "Fragata Libertad"

2000 – 2005
